Art Unit: 1793

DETAILED ACTION

Claim Objections

1. Claim 12 is objected to because of the following informalities: in the 4th line of the claim, insert "be" before "driven". Appropriate correction is required.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).
- 4. Claims 1, 3, and 7-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over JP 10-317084.

Art Unit: 1793

JP 10-317084 discloses a continuous casting apparatus and method for casting a metal (aluminum) cast member comprising the steps of driving a casting wheel 10 which has a groove formed on an external peripheral surface thereof, such that an endless belt 12 is closed over the groove in a direction of casting (abstract; and Figures 1, 2, and 6). JP 10-317084 fails to specifically teach that the casting wheel and endless belt are differentiated in temperature therebetween by heating the endless belt to a temperature of ((melting point or liquidus-line temperature of the metal) x 0.35) or above, before the belt contacts the molten metal.

However, it would have been obvious and conventional in the continuous casting art to heat the endless belt at a higher temperature than the melting point or liquidus point of the intended metal to be cast, since at higher temperatures the molten metal would still be kept in a liquidus state until it passes a predetermined distance on the casting wheel.

Therefore, it would have been obvious to one of ordinary skill in the art at the time the applicants' invention was made to control the endless belt to a temperature of ((melting point or liquidus-line temperature of the metal) x 0.35) or above, since this would involve routine experimentation to find optimum results. Furthermore, it would have been obvious to try to find a control temperature and/or range of temperatures for the endless belt, since the applicants are choosing from a finite number of identified predictable solutions with a reasonable expectation of success, in order to obtain optimum heating. *KSR Int'l Co. v. Teleflex Inc.*, 82 USPQ.2d 1385 (S.Ct. 2007).

Art Unit: 1793

Response to Arguments

5. The examiner acknowledges the applicants' amendment received by the USPTO on November 5, 2007. The amendments overcome the prior 35 USC 102(b) rejections over JP 5-311271 and JP 62-292244. However, the amendment has introduced a new objection to claim 12 (see above section 1). The applicants have cancelled claims 2, 4-6, and 13. Claims 1, 3, and 7-12 are currently under consideration in the application.

6. Applicants' arguments with respect to claims 1, 3, and 7-12 have been considered but are most in view of the new ground(s) of rejection.

Conclusion

7. Applicants' amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Application/Control.Number: 10/565,540

Art Unit: 1793

the advisory action. In no event, however, will the statutory period for reply expire later

Page 5

than SIX MONTHS from the date of this final action.

8. Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Dr. Kevin P. Kerns whose telephone number is (571)

272-1178. The examiner can normally be reached on Monday-Friday from 8:00am-

5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Jonathan Johnson can be reached on (571) 272-1177. The fax phone

number for the organization where this application or proceeding is assigned is 571-

273-8300.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a

USPTO Customer Service Representative or access to the automated information

system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
